

The Theme

After years of living dangerously, exploiting the natural resources for our machines of modern living, humankind faces the challenge of restoring the balance to counter effects like global warming, erosion and pollution.

We strongly believe that architects & designers have a great role to play to accelerate this at an exponential scale. Thus the theme 'Design with the Environment' aims to build a knowledge bank which can be used by everyone working in this domain. The theme is further divided in four sub themes -

-Quality of Life

-Social sustainability

-Image of City

-Smart village

You can write research papers or present your work ideas through posters. The papers can be based upon the above mentioned sub themes, with key phrases as mentioned below-

-Materials & technology

-Architecture & embodiment

-Planning policies & design regulations

-Risk management

-Participatory design

-Digital map v/s cognitive map

-Safety & security

-Universal design

-Landscape

31 JAN & 1 FEB
2017
PUNE

The proceedings will be published in a refereed journal with **ISBN**

Requirements of presentations -

The presentation can be either a Research paper or a poster. The research papers submitted will be reviewed by a panel of eminent experts in the field.
